Type Y and Press Enter

```
Welcome to the Python installation manager configuration helper.
```

```
*****
```

```
Windows is not configured to allow paths longer than 260 characters.
```

```
Python and some other apps can exceed this limit, but it requires changing a  
system-wide setting, which may need an administrator to approve, and will  
require a reboot. Some packages may fail to install without long path support  
enabled.
```

```
Update setting now? [y/N] |
```

Type Y and Press enter

```
enabled.  
Update setting now? [y/N] y  
The setting has been successfully updated, and will take effect after the next reboot.
```

```
*****
```

The global shortcuts directory is not configured.

Configuring this enables commands like `python3.14.exe` to run from your terminal, but is not needed for the `python` or `py` commands (for example, `py -V:3.14`).

We can add the directory (`C:\Users\Shivani\AppData\Local\Python\bin`) to PATH now, but you will need to restart your terminal to use it. The entry will be removed if you run `py uninstall --purge`, or else you can remove it manually when uninstalling Python.

Add commands directory to your PATH now? [y/N] |

This will add python commands to your system path automatically

The global shortcuts directory is not configured.

Configuration checks completed.

To run these checks again, launch Python install manager from your Start menu,
or py install --configure from the terminal.

*****

Usage:
  py <regular Python options>
                        Launch the default runtime with specified options. This
                        is the equivalent of the python command.
  py -V:<TAG>
                        Launch runtime identified by <TAG>, which should
                        include the company name if not PythonCore. Regular
                        Python options may follow this option.
  py -3<VERSION>
                        Equivalent to -V:PythonCore\3<VERSION>. The version
                        must begin with the digit 3, platform overrides are
                        permitted, and regular Python options may follow. py -3
                        is the equivalent of the python3 command.
  py exec <any of the above>
                        Equivalent to any of the above launch options, and the
                        requested runtime will be installed if needed.
  py help [<CMD>]
                        Show help for Python installation manager commands
  py install <TAG>
                        Download new Python runtimes, or pass --update to
                        update existing installs.
  py list [<FILTER>]
                        Show installed Python runtimes, optionally filtering by
                        <FILTER>.
  py uninstall <TAG>
                        Remove one or more runtimes from your machine. Pass
                        --purge to clean up all runtimes and cached files.
